

OpenType FontFonts

OpenType FontFonts do everything that the old PostScript and TrueType formats could do – and so much more.

With OpenType, multiple platforms (Mac and PC), multiple fonts (small caps, expert, various figure sets) and multiple languages (Western, Cyrillic, Greek) can exist in a single font file. Ligature, swash, and alternate characters can be applied automatically. Each font can hold thousands of extra characters, vastly enhancing your typographic toolset.

See the FontFont OpenType User Guide for complete details.

OpenType FontFonts support a broader range of languages than OpenType (Western) FontFonts. (Supported language encodings include Central European, Latin Extended, Greek, Cyrillic, Cyrillic Extended, Arabic and Hebrew.)

Each OT FontFont is accompanied by a font-specific Info Guide listing all its layout features and the language encodings that it supports.
